Bayesian statuses in the fun way why should I use bayes? Bayesian statuses are an specific approach to applying probability to statistical problems. It can be used to estimate parano meters, models selection, hypothesis test and prediction. A Bayesian approach to statistics can be applied to any of these contexts. For example, suppose you want to estimate the motion of a normally distributed population. You can use bayes to find the expected value and the standard error of your estimate. Apply now to start your path to career success with strategic recommendations of bachelor's degree, master and MBA of bachelor and MBA. Apply in 5 minutes. On the other hand, you can a frequentist approach and calculate the sample average and the standard deviation of your estimate. Both methods would give similar values in this case.
